

IMPROVE YOUR EXISTING COOLING SOLUTION

How to boost earnings by combining your existing solution with DC Air Conditioning!

Profit check list - will you benefit?

There is a time and place for DC Air Conditioning. But when the settings are right, your running costs will drop and your earnings will increase. To find yourself in the profit zone, recognise your sites in one or more of the listed circumstances:

- ✓ Remote sites powered by renewable energy sources
- ✓ Sites with unstable uptime and income due to frequent power outage and/or intermittent power
- ✓ Sites containing equipment with different temperature sensitivities, i.e. electronics and battery compartments
- ✓ Sites located in regions with extreme ambient temperatures
- ✓ Hybrid sites which depend on a zero-downtime strategy

4 combinations that will boost your earnings

What?	Where?	Why?
Free Cooling + DC Air Conditioning	Remote locations where the outside temperature varies from above to below cooling set point.	To maintain low inside temperatures at low running costs, when free cooling is not an option.
Air Conditioning + DC Air Conditioning	Remote locations + sites with temperature-sensitive equipment which requires low cooling set points, e.g. battery compartments.	To create dual climate zones to keep running costs low + to extend service life of existing air conditioner, because it is only activated for emergencies.
Heat Exchange/ Thermosiphon + DC Air Conditioning	Challenging environments, e.g. coastal areas + sites with temperature-sensitive equipment which requires low cooling set points, e.g. battery compartments.	To create dual climate zones to keep running costs low + to extend service life of existing air conditioner, because it is only activated for emergencies.
Displacement Free Cooling + DC Air Conditioning	Remote locations where the outside temperature varies from above to below cooling set point + small applications with stagnant inside air.	To maintain low inside temperatures at low running costs, when free cooling is not an option.
